SOFTWARE ENGINEER · .NET, ANGULAR AND AZURE

I'm a software engineer working with **C#** and **.NET** on the backend and **Angular** with **Angular Material** on the frontend. My strongest area is **observability**: logging, metrics and distributed tracing with **OpenTelemetry**, and I use **KQL** every day to dig into production issues. I like owning a problem end to end, from the first log line to the fix in production.

PROFESSIONAL EXPERIENCE

Akvelon

October 2025 - Present

Software Engineer · .NET & Angular

- Software engineer on a team building and maintaining **large scale distributed services**.
- Full stack development** with .NET and C# on the backend and Angular with Angular Material on the frontend.
- Focus on **observability**: logging, metrics and distributed tracing with **OpenTelemetry**.
- Work daily with Azure services, Azure DevOps pipelines and scripts, and KQL.
- Contribute to security and dependency maintenance, including authentication library migrations and npm vulnerabilities.
- Build internal tooling that improves the team's engineering workflow.

Golden Solution

April 2025 - October 2025

Full-Stack Developer · Angular & ASP.NET Core

July 2025 - October 2025

- Designed and built the Online Prodaja ticket sales platform from the ground up** with Angular 19, ASP.NET Core 8 and MS SQL Server.
- Implemented authentication, guest and user checkout, seat selection and payment processing.
- Maintained and extended the Bus Ticketing Administration System, and turned complex SQL queries into a clean REST API for the Salter project.

Front-End Angular Intern

April 2025 - July 2025

- Upgraded a back-office system across **nine major Angular versions** (10 to 19) and built its reporting dashboards.
- Moved from an Angular role into full-stack work **within three months**, which led to the full-time position.

PROJECTS

Forensic IoT Digital Twin: .NET, Angular, PyTorch.

Learns a device's normal behaviour with LSTM models, flags anomalies in real time over MQTT and SignalR, and stores each incident as SHA-256 hashed evidence.

[Source Code](#)

RoomMate Finder: .NET 10, Angular 20, SQL Server.

Roommate matching with listings, requests, image upload to blob storage and JWT refresh tokens.

[Source Code](#)

CashiQ: ASP.NET Core, Angular, PostgreSQL.

Personal finance platform with multiple accounts, budgets, recurring payments and spending analytics, built on a layered architecture with tests.

[Source Code](#)

BearlyBlogging: Spring, Angular, PostgreSQL.

Blogging platform with Markdown posts, role based access and JWT authentication, live in production.

EDUCATION

Bachelor's studies in Computer Science

Faculty of Technical Sciences Čačak, University of Kragujevac · 2022 - 2026
Average grade: **9.1 / 10**

AWARDS & CERTIFICATIONS

Startup Weekend Winner (2025): our team won with a working prototype and business plan for a tech solution

Oracle Academy: SQL Programming, Java Programming

LANGUAGES

Serbian (Native) · **English** (B2)

TECH STACK

- Frontend**: Angular, Angular Material, TypeScript, SCSS
- Backend**: C#, .NET, ASP.NET Core, EF Core, SignalR, Java Spring Boot
- Cloud**: Azure, Azure Functions, Azure Blob Storage
- Observability**: OpenTelemetry, KQL
- CI/CD & Testing**: Azure DevOps, GitHub Actions, xUnit, pytest
- Database**: MS SQL Server, PostgreSQL, MySQL
- AI/ML**: Python, PyTorch, FastAPI
- Other Tools**: Git, Docker, Linux, JWT, REST APIs, MQTT
